

Dome Light Cover Hinge Broke-FIXED

The dome (sunroof motor) light cover hinge broke off due to bad design or negligence when prying it open causes the cover to hang down. Instead of buying a new one with the same problem waiting to happen, I decided to fix it.

Cut out 2 rectangular shape from a broken CD (I used Internet promotion CD), use crazy glue to glue them to the inside cover as the picture shown. I bought 2 picture hangers at home depot for about 40 cents and glue them on top of the rectangular CD. Wait for it to dry and install it. It worked wonderfully. Just make sure the surfaces are clean before you apply the crazy glue.
